

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A positive electrode material for non-aqueous electrolyte lithium ion battery, comprising:
  - an oxide containing lithium and nickel; and
  - a lithium compound deposited on a surface of the oxide, the lithium compound covering nickel present on the surface of the oxide,
    - the lithium compound comprising at least one selected from the group consisting of lithium phosphate, lithium phosphorus oxynitride (LiPON),  $\text{Li}_7\text{O-B}_2\text{O}_3$  compound,  $\text{Li}_2\text{O-B}_2\text{O}_3\text{-LiI}$  compound,  $\text{Li}_2\text{O-SiS}_2$  compound,  $\text{Li}_2\text{S-SiS}_2\text{-Li}_3\text{PO}_4$  compound, lithium hydroxide, lithium acetate, lithium acetylide-ethylcenediamine complex, lithium benzoate, lithium carbonate, lithium fluoride, lithium oxalate, lithium pyruvate, lithium stearate, lithium tartrate, lithium bromide, lithium iodide,  $\text{Li}_2\text{S-SiS}_2$ , lithium sulfate.
2. (Original) A positive electrode material according to claim 1,
  - wherein, when the lithium compound is deposited to cover substantially an entire surface of the oxide, thickness of a cover layer of the lithium compound ranges from 5 nm to 1  $\mu\text{m}$ .
3. (Currently Amended) A positive electrode material according to claim 1,
  - when the lithium compound is deposited to sprinkle on the surface of the oxide, a volume of the lithium compound ranges from 0.5 to 10 % with respect to when that of [[a]] the positive electrode active material is set at 100.
4. (Original) A positive electrode material according to claim 1,

wherein the lithium compound includes lithium ion conductivity.

5. (Canceled)

6. (Currently Amended) A non-aqueous electrolyte lithium ion battery, comprising:  
a positive electrode active material layer comprising a positive electrode material according to claim 1; including: an oxide containing lithium and nickel; and a lithium compound deposited on a surface of the oxide, the lithium compound covering nickel present on the surface of the oxide.

a negative electrode active material layer comprising a negative electrode active material; and

an electrolyte layer disposed between the positive and negative electrode active materials layers.

7-10. (Cancelled)
